Visualizing Routes

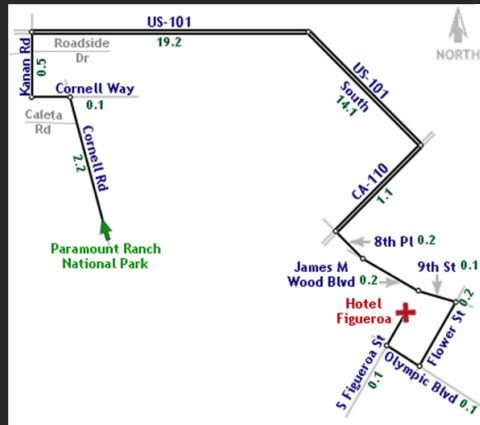

A Better Visualization

LineDrive [Agrawala & Stolte 2001]

Hand-drawn route map

LineDrive route map

Summary

- Space is the most important visual encoding
- Geometric properties of spatial transforms support geometric reasoning
- Show data with as much resolution as possible
- Use distortions to emphasize important information

Announcements

Final project

New visualization research or data analysis

- Pose problem, Implement creative solution
- Design studies/evaluations

Deliverables

- Implementation of solution
- 6-8 page paper in format of conference paper submission
- Project progress presentations

Schedule

- Project proposal: **Mon 11/5**
- Project progress presentation: **11/12 and 11/14 in class (3-4 min)**
- Final poster presentation: **12/5 Location: Lathrop 282**
- Final paper: **12/9 11:59pm**

Grading

- Groups of **up to 3 people**, graded individually
- Clearly report responsibilities of each member

Visual Explainers

Topics

1. **Storytelling**
2. **Design space of narrative visualization**
3. **Interactive documents**
4. **Chart sequences**

Storytelling

As ancient as mankind

Going forward
I carried wax along the line, and laid it
thick on their ears. **They tied me up**, then, plumb
amidships, **back to the mast**, lashed to the mast,
and took themselves again to rowing. Soon,
as we came smartly within hailing distance,
the two **Sirens**, noting our fast ship,
off their point, **made ready, and they sang...**

Generals Wary of Move to Cut Their Ranks

By GINGER THOMPSON and THOM SHANKER

WASHINGTON — Maj. Gen. Paul D. Eaton, a retired Army officer, is familiar with the perks and pitfalls of power, having commanded tens of thousands of troops at Fort Benning, Ga., managed budgets exceeding \$2 billion in Iraq, and overseen layers upon layers of staff members who helped manage both his professional duties and his personal life.

He has experienced the full range of lifestyles that come with military leadership, living at one point in an elegant antebellum mansion, and at another, with eight other officers crowded in a marble bathhouse behind one of Saddam Hussein's old palaces.

When he traveled, he was occasionally able to justify the use of military aircraft, but most times, he said, he flew coach. And today he lives on a pension worth 75 percent of his military salary, with health benefits that cover everything except dental and eye care for himself and his wife.

"We are well compensated, and we live very comfortable lives," General Eaton said, referring to the military's most senior leaders. "But when you look at all the things going on around a general, the nation is getting a very, very high return on its money."

Not everyone at the Pentagon agrees. Two weeks ago, Defense Secretary Robert M. Gates announced a sweeping effort to improve efficiency that, among other things, takes aim at the military's sacrosanct corps of generals and admirals, ordering his staff to cut at least 50 positions, and making clear that he would be happier if they cut more.

Space launches

To Earth orbit or higher, at October 17th 2018

A modern space race The next generation

Private businesses and rising powers are replacing the cold-war duopoly

Over 4,000 satellites circle Earth, providing communications services and navigational tools, monitoring weather, observing the universe, spying and doing more besides. Getting them there was once the business of the superpowers' armed forces and space agencies. Now it is mostly done by companies and the governments of developing countries.

reaching orbit was hard. Between 1957 and 1962, 32% of American launches and 50% of Soviet ones failed. Accidents still happen: on October 19th a Russian rocket aborted its ascent shortly after launch (both crew members landed unharmed). Only states could assume such risks—and even if American firms had wanted to bear them, its government would not let them on national-security grounds. Companies eager to send objects into space, including telecoms firms, had to hitch a ride with NASA. This changed when European countries started building launchers through a mostly state-owned company called ArianeSpace, which touted for custom among satellite-makers around the world. When the space shuttle Challenger exploded in 1986, NASA got out of the satellite-launching business. It and, later, the Pentagon be-

came new customers for private launch firms, alongside the satellite operators. In the past decade the West's space-launch market has become more competitive thanks to an innovative new entrant, SpaceX, but state-run programmes still lead the way in emerging markets. In 2003 China became the third country to put a person into orbit; India plans to follow suit in 2022. Both sell launch services to private clients. China did legalise private space flight in 2016, but no companies based there have yet reached orbit on their own. Like their cold-war predecessors, these Asian titans have strategic goals as well as a thirst for publicity. They need independent access to space for communication, intelligence and navigation. However commercialised space gets, the competition will never be solely economic.

Homer Pace After Age 34
If the accusations are correct, Bonds was 34 in his first season on steroids. Here are projected home run paces for each player after age 34.

----- PROJECTED PACE BASED ON AVERAGE OF PREVIOUS FIVE SEASONS

Aaron
Actual homers slightly outpace projected homers for five seasons.

Ruth
Averaged 46.4 homers a season from age 30 to 34. Averaged 42.5 for next four seasons.

Bonds
From age 35 to 39, he averaged 14 more homers a season than projected.

Others Taking Aim

Albert Pujols
Averaging 40 homers a season, he has started stronger than the three leaders did.

Ken Griffey Jr.
Many thought he would be the first to catch Ruth and Aaron until injuries limited his output.

Alex Rodriguez
Youngest to reach 400 homers.

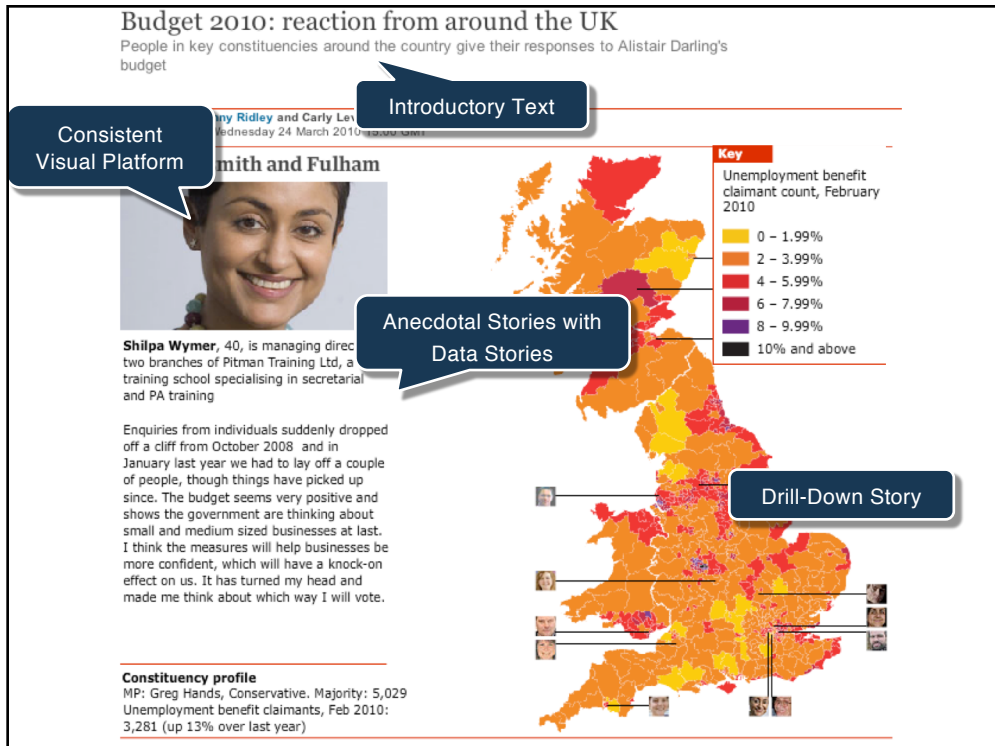

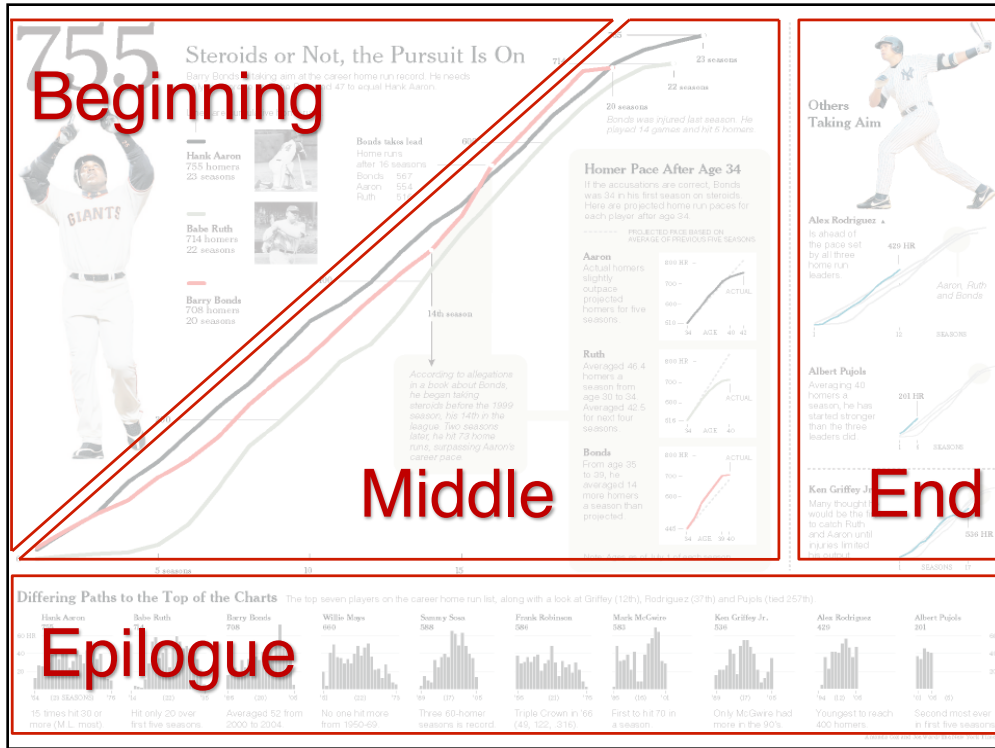

Albert Pujols
Second most over in first five seasons.

Note: Ages as of July 1 of each season.

Differing Paths to the Top of the List

Player	Home Runs	Seasons	Notes
Hank Aaron	755	25	15 times hit 30 or more (M.L. most)
Babe Ruth	714	22	Hit only 20 over first five seasons
Barry Bonds	738	20	Averaged 52 from 2000 to 2004
Wills Mays	660	19	No one hit more from 1950-69
Sam Rice	588	17	Three seasons record: (49, 122, 316) a season more in the 90's

Narrative theory

Story grammars:

Models of narrative cognition based on systematic studies of what impacts peoples' ability to recall parts of a story

Reader mentally indexes events by time, space, protagonist, causality, intention [Zwaan 1995]

SUMMARY OF REWRITE RULES FOR A SIMPLE STORY GRAMMAR*

```

FABLE → STORY AND MORAL
STORY → SETTING AND EVENT STRUCTURE
SETTING → { STATE* (AND EVENT*) }
EVENT* → { EVENT* }
STATE* → STATE ( (AND STATE)* )
EVENT* → EVENT ( ( { AND } EVENT* ) ( (AND STATE)* ) )
           { CAUSE }
EVENT STRUCTURE → EPISODE ( (THEN EPISODE)* )
EPISODE → BEGINNING CAUSE DEVELOPMENT CAUSE ENDING
BEGINNING → { EVENT* }
           { EPISODE }
DEVELOPMENT → { SIMPLE REACTION CAUSE ACTION }
           { COMPLEX REACTION CAUSE GOAL PATH }
SIMPLE REACTION → INTERNAL EVENT ( (CAUSE INTERNAL EVENT)* )
ACTION → EVENT
COMPLEX REACTION → SIMPLE REACTION CAUSE GOAL
GOAL → INTERNAL STATE
GOAL PATH → { ATTEMPT CAUSE OUTCOME }
           { GOAL PATH (CAUSE GOAL PATH)* }
ATTEMPT → EVENT*
OUTCOME → { EVENT* }
           { EPISODE }
ENDING → { EVENT* (AND EMPHASIS) }
           { EMPHASIS }
           { EPISODE }
EMPHASIS → STATE

Remembrance of Things Parsed [Mandler and Johnson 1977]

Narrative theory applied

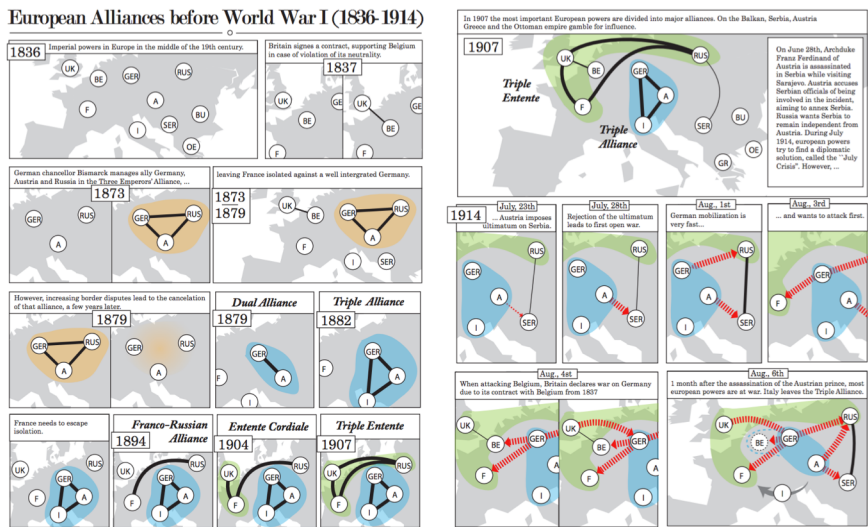

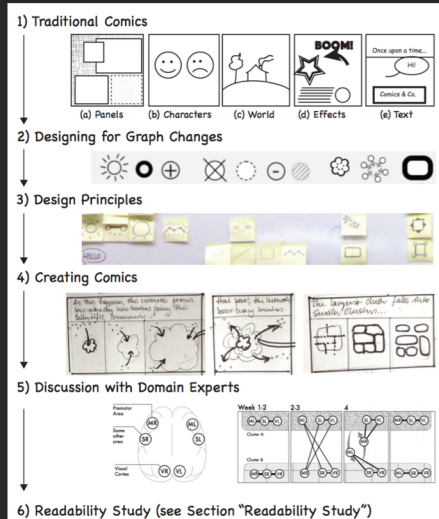

Figure 3. Graph comic example illustrating historical events preceding WWI, targeted to a general audience.

Graph Comics [Bach et al. 2016]

Narrative theory applied

- C1. Element identity**—Characters in traditional comics are recognizable via their distinct visual features. In graph visualization, nodes and edges are usually represented by circles, sometimes using labels for identifications. Variations in shape and color reflect attributes in the data.
- C2. Depicting change**—In comics, readers can infer changes even if not shown explicitly. For example, a baby being shown implies it has been born. In graphs, a (new) node being shown does not mean it was not there before.
- C3. Order of events**—Many changes exhibit a natural order (e.g. humans grow old, objects fall down, day turns into night). Changes in graphs do not have a natural order nor duration; a cluster can grow or shrink, divide or merge.
- C4. Spatial context**—In comics, the spatial context of a scene is usually indicated by the panel background: the same background means the same place and often the same scene. Switching spatial context from one cluster to another may not be recognized by a reader (both consists of nodes and links).
- C5. Number of elements**—Comics usually show a small set of characters in every panel. Changes in graphs, may involve many more elements than it is possible to show in a panel.

Graph Comics [Bach et al. 2016]
